CLAIMS

1	1. A method for creating software, comprising:		
2	providing a plurality of nodes and a directory of applications, each of		
3	an application being created by use of at least a portion of the plurality of		
4	the nodes;		
5	selecting at least a portion of the plurality of nodes to create a		
6	selected node layout that represent a plurality of application logics; and		
7	executing the selected node layout by a server program.		
1	2. The method of claim 1, further comprising:		
2	visually displaying the selected node layout as a visual node layout.		
1	3. The method of claim 1, wherein at least a portion of the		
2	plurality of application logics includes a user interaction.		
1	4. The method of claim 3, wherein the user interaction permits a		
2	user to interact with the server program.		
1	5. The method of claim 3, wherein the user interaction is		
2	executable on multiple channels.		
1	6. The method of claim 3, wherein the user interaction is		
2	executable by at least one of web, voice, e-mail and wireless channels.		
1	7. The method of claim 1, wherein the plurality of nodes		
2	includes a user interface node.		
1	8. The method of claim 7, wherein the user interface node		
2	includes GUI components and a template for the physical layout of static		
3	and dynamic portions of a user display.		

- 1 9. The method of claim 8, wherein dynamic portions of the user
- 2 display are used by the server program at runtime to layout application
- 3 specific GUI components.
- 1 10. The method of claim 3, wherein the user interaction includes
- 2 a user interface node, a user interface block node and an interaction node.
- 1 11. The method of claim 10, wherein the user interface node and
- 2 user interface block node create a user interaction based on business rules.
- 1 12. The method of claim 11, wherein the interaction node
- 2 executes the user interaction.
- 1 13. The method of claim 1, wherein each node is a visual
- 2 representation of a software function.
- 1 14. The interface of claim 10, wherein each node includes inputs
- 2 to a software function.
- 1 15. The interface of claim 1, wherein the plurality of nodes
- 2 includes task node interfaces with external components to exchange data
- 3 information.
- 1 16. The method of claim 1, wherein the selected node layout can
- 2 be debugged visually
- 1 17.. The method of claim 1, wherein the parameter and properties
- 2 values of the nodes can be changed dynamically based on business rules
- 1 18.. The method claim 1, wherein the parameter and properties
- 2 values can be linked to variables

1	19. The method of claim 1, wherein the application logic is			
2	directly executed without compilation of application logic.			
1	20. The method of claim 1, wherein the application logic can be			
2	paused and saved during execution			
2	paused and saved during execution			
1	21. The method of claim 21, wherein the saved application logic			
2	can be restored and resumed.			
1	22 The method of claim 22, wherein the saved application logic			
2	can be restored and execution resumed on a copy of the server program on			
3	a computer other than where it was initially started			
1	23. A method for creating software, comprising:			
2	providing a plurality of nodes and a directory of applications, each of			
3	an application being created by use of at least a portion of the plurality of			
4	the nodes;			
5	selecting at least a portion of the plurality of nodes to create a			
6	selected node layout that represent a plurality of application logics;			
7	defining the application logic by selecting at least one of GUI			
8	parameters and options in each selected node;			
9	executing the selected node layout by a server program.			
1	24. The method of claim 23, further comprising:			
2	visually displaying the selected node layout as a visual node layout.			
1	25. The method of claim 24, further comprising:			
2	monitoring a flow of control through each node in the node layout			
3	during execution by displaying individual node execution measurements.			
ی	during execution by displaying individual node execution measurements.			

1 =	26.	The method of claim 24, wherein the individual node
2	execution me	asurements include usage counts, total execution time and
3	average execu	ution time.

- 1 27. The method of claim 23, further comprising:
- 2 providing documentation of a functional use of a node.
- 1 28. The method of claim 23, further comprising:
- providing a graphic description of a plurality of nodes that represent
 a full application logic.
- 1 29. The method of claim 23, further comprising:
- 2 creating a history of different versions of the application logic.
- 1 30. The method of claim 23, further comprising:
- 2 creating access control of the application logic.
- 1 31. The method of claim 30, wherein the access control provides
- 2 single access of the application logic for purposes of modification and
- 3 multiple access of the application logic for purposes of viewing.
- 1 32. The method of claim 23, further comprising:
- 2 automatically validating the application logic against errors.
- 3 33. The method of claim 23, further comprising:
- 4 aggregation at least a portion of the plurality of nodes to create an 5 aggregated node.
- 1 34. The method of claim 33, wherein the aggregated node is an 2 application logic.
- 1 35. The method of claim 34, wherein the aggregated node can be used different application logics.

l .	36. A method for creating software, comprising:			
2	providing a plurality of nodes and a directory of applications, each of			
3	an application being created by use of at least a portion of the plurality of			
4	the nodes;			
5	selecting at least a portion of the plurality of nodes to create a			
5	selected node layout that represent a plurality of application logics;			
7	defining external application interfaces; and			
8	executing the selected node layout by a server program.			
•				
l	37. The method of claim 36, further comprising:			
2	establishing conditions for execution of the selected node layout.			
1	38. The method of claim 37, wherein the conditions for the			
2	execution include time based events.			
1	20 The method of claim 27 subscript the conditions 6 st			
1	39. The method of claim 37, wherein the conditions for the			
2	execution include programmatic events.			
1 .	40. The method of claim 39, wherein selected programmatic			

events create a trigger for the exeuction of the selected node layout.

2
